## RESEARCH INTERESTS

---

Machine Learning, (Deep) Reinforcement Learning, Multi-Arm Restless Bandits, Q-learning, Markov Decision Processes, Stochastic Approximations, Optimisation, Stochastic Modelling, Convergence, Markov Chains.

## EDUCATION

---

<b>Ph.D.</b> , Telecommunications and Information Processing, Ghent University	Dec. 2015 - Sept. 2019
<b>M.Tech.</b> , Industrial Engineering and Operations Research, IIT Bombay ( <b>GPA: 9.16/10</b> )	Jul. 2012 - Jun. 2014
<b>B.Tech.</b> , Electronics and Telecommunication, SGGSIET Nanded ( <b>GPA: 8.43/10</b> )	Jul. 2008 - Jun. 2012

## RESEARCH EXPERIENCE

---

**Postdoctoral Research Scientist** Oct. 2019 - Present  
INRIA, Sophia Antipolis, France  
Advisor: Dr. K. Avrachenkov  
Machine learning with applications in adaptive web crawling

- Working on dynamic scheduling for adaptive web crawling with (deep) reinforcement learning (RL) using multi-arm restless bandit framework.
- Obtained Whittle indices of restless bandits online through Q-learning and deep learning. Especially for large state space, these indices are learned through a artificial neural network (ANN).
- Developed three novel online algorithms using machine learning (stochastic approximations) which can learn exact dynamics of web page change process. The developed model was tested on large Wikipedia data set and the performance is evaluated through convergence rate and analysis of variance .
- Working on deep RL (Double DQN) models for influence maximisation in dynamic complex networks. The model is being tested on various real data sets (hospital, high-school, meme-tracker, etc).

Provably convergent algorithm for deep reinforcement learning

- Proposed a modified scheme called Full Gradient DQN (FG-DQN) scheme that has a sound theoretical basis and compared it with the original scheme (DQN) on sample problems.
- Establish theoretical convergence guarantees for FG-DQN with stochastic approximations and showed that it gives better performance at the expense of some additional computational overhead per iteration.
- Performed extensive numerical simulations on Open AI gym environment to compare the performance of FGDQN with respect to standard double DQN.

**Ph.D. Research** Dec. 2015 - Sep. 2019  
Ghent University, Ghent, Belgium  
Advisors: Prof. D. Fiems, Dr. K. De Turck  
Stochastic modelling of wireless sensor networks

- Obtained optimal control policies for an energy harvesting wireless sensor network using Markov decision processes and analysed the impact of the value of information on the transmission policy of the node.
- Proposed and solved a stochastic model for an energy harvesting wireless sensor node where the energy harvesting process is Markov-modulated and the data sensing process is ergodic. The performance analysis of the model can be used for optimising the design of wireless sensor networks.
- Proposed a numerically tractable stochastic model for the performance evaluation of depth-based routing in underwater wireless sensor networks which requires significantly less computational efforts as compared to standard network simulators.

Optimal control for large scale wireless sensor networks

- Developed a stochastic model for large sensor networks without energy harvesting dynamics, relying on large-scale techniques including a mean field approach, fluid and diffusion limits.
- Investigated how well these models could capture the performance of the sensor networks by comparing numerical experiments with the model with the outcome of simulation experiments.
- Obtained some interesting theoretical proprieties of the optimal transmission policies which are easy to implement in practice, such as a bang-bang nature and a threshold structure.

## SELECTED TALKS

---

- **K. Patil**, joint work with K. Avrachenkov and G. Thoppe  
Online algorithms for estimating page change rates in adaptive web page crawling INRIA, 2020
- **K. Patil**, joint work with K. De Turck, Koen and D. Fiems  
Performance evaluation of large-scale wireless sensor networks - A mean field approach. INRIA, 2019
- **K. Patil**, joint work with K. De Turck, Koen and D. Fiems  
Stochastic Modelling of energy harvesting wireless sensor networks IIT Bombay 2019
- **K. Patil** joint work with M. Jafri, D. Fiems and A. Marin  
Performance evaluation of depth based routing in underwater sensor networks StochMod 2018
- **K. Patil**, joint work with K. De Turck, Koen and D. Fiems  
Optimal control in wireless sensor networks: a mean-field approach ECQT 2018

## TEACHING EXPERIENCE

---

### Ghent University

Teaching Assistant, Department of TELIN, Ghent University

C003399 Computer Intensive Statistical Methods

Spring 2018

### IIT Bombay

Teaching Assistant, Department of IEOR, IIT Bombay

- IE 616 Decision Analysis and Game Theory

Spring 2014

- IE 605 Engineering Statistics

Autumn 2013

## SKILL SET

---

### Programming Languages

Python (numpy, scipy, pytorch), C, SQL, AMPL

### Computational/ Utility Tools

MATLAB, Mathematica, L<sup>A</sup>T<sub>E</sub>X

### Statistical Tools

R, SAS

### Platforms

Mac OS, Linux (Ubuntu, Fedora)

## ADDITIONAL TRAINING

---

### Workshops

- Summer school on Numerical methods for stochastic models: mean-field, CIRM, Marseille
- Introduction to High performance Computing, Ghent University
- Workshop on Mathematica, Ghent university
- Workshop on how to write research proposal. Ghent University

summer 2017

Spring 2017

Autumn 2016

Autumn 2016

### Selected Coursework

- E003700 - Game Theory with Engineering Applications
- E014230 - Stochastic Processes
- CS 709 - Convex Optimisation
- IE 647 - Applied Integer Programming

Autumn 2018

Autumn 2017

Autumn 2013

Autumn 2013

## PROFESSIONAL EXPERIENCE

---

### Analyst - Business Consulting

Jul. 2014 - Oct. 2015

HSBC Data Processing Centre, Bangalore, India

Global Investigation Analytics

- Worked on financial crime compliance/ risk compliance analytics for model development, deployment, validation and tuning, with multiple regions including UK, HK.
- Developed model for correspondent banking to detect suspicious activities resulting in money laundering using techniques like linear regression, forecasting, random sampling, Above the Line (ATL) and Below the Line (BTL) testing, threshold calibration and tuning.
- Validated the model based on the feedback with hypothesis testing and clustering analysis. Also, analysed scope of the model under different global scenarios.
- Incorporated important techniques like frequent alerter, hub-spoke optimisation while developing the model for different regions.
- Implemented complete model in SQL/SAS to speed up the process.
- Delivered Ad-Hoc requests on time by analysing the data in Excel/VBA/SAS and also provided support.

## EXTRA-ACADEMIC ACTIVITIES

---

- Reviewer for Performance Evaluation, Annals of operations Research, MDPI - Mathematics, IEEE transactions on green computing
- Jury member of master thesis committee; Thesis entitled "The P2Pool mining pool - An analysis of a distributed cryptographically secured database".
- Volunteered at master thesis fair at Ghent university to give the information on department's research domains so that students can choose their thesis topic.

Oct. 2018

Feb. 2017
